Broadcasting

- ❑ Broadcasting refers to the distribution of audio, video, or multimedia content to a wide audience through various media channels, such as radio, television, or the internet.
- ❑ Broadcasting typically involves one-to-many communication, where a single source (the broadcaster) transmits content simultaneously to multiple recipients (the audience).

Broadcasting can be categorized into different forms, including:

- ❑ **Radio Broadcasting:** Transmission of audio content over radio frequency bands using AM (amplitude modulation) or FM (frequency modulation) techniques.
- ❑ **Television Broadcasting:** Transmission of audiovisual content over television channels using terrestrial, cable, satellite, or internet-based platforms.
- ❑ **Internet Broadcasting:** Distribution of multimedia content over the internet through streaming services, podcasts, webcasts, and social media platforms.
