Types of Transmission Modes

- ❑ Transmission mode refers to the method by which data is transmitted between devices in a communication system. It determines the direction and timing of data flow between the sender and receiver.

There are three primary transmission modes:

- 1. Simplex Mode**
- 2. Half-duplex Mode**
- 3. Full-duplex mode (Duplex Mode)**

Transmission mode

```
graph TD; A[Transmission mode] --> B[Simplex mode]; A --> C[Half-Duplex mode]; A --> D[Full-Duplex mode];
```

**Simplex
mode**

**Half-Duplex
mode**

**Full-Duplex
mode**
