

PAN (Personal Area Network)

Elementrix Classes

PAN (Personal Area Network)

- ❑ A Personal Area Network (PAN) is a network designed for communication between devices within a very short range, typically around a single person's workspace.
- ❑ PANs are commonly used for connecting personal devices like laptops, smartphones, tablets, printers, and wearables.

Characteristics of PANs:

- ❑ **Very Limited Range:** Typically limited to just a few meters.
- ❑ **Focus on Personal Devices:** PANs center around an individual's interconnected devices.
- ❑ **Can be Wired or Wireless:** PANs can use wired connections (like USB, Thunderbolt) but are more commonly implemented using wireless technologies.

- ❑ **Wireless Technologies:** The most popular wireless technologies for PANs include Bluetooth, Infrared (IrDA), and sometimes Wi-Fi.
